PROFILE

I am an enthusiastic Web Designer and Developer Student at Napier University.

Before enrolling in this degree, I made a hard decision to leave behind my journey of working with vulnerable people and to change my career completely.

Now, with the desire to keep learning, I am looking for an opportunity in your company to develop technical skills on my way to becoming a Full Stack Developer.

You can see my projects [here](#).

WORK EXPERIENCE

Manager in Temporary Accommodation for Homeless People at CGHG.

Feb 2011 - Aug 2020

For more than nine years, I have worked as a Manager in Temporary Accommodation for Homeless People, running a house for 14 residents, and this is my experience:

- I have learned how to deal with difficult personalities and unpredictable behaviours, which has helped develop my interpersonal skills. I also gained strong empathy through my role.

- I have gained capabilities as resilience and problem-solving as I had to deal with challenging situations with people suffering from traumas, mental health problems, or addictions.

- Daily communication with the Edinburgh Council and support workers was essential for the well-being of the residents. Regular updates were required via phone and email, so I have improved my time management and communication abilities.

- The company awarded me The Best Employee of the Year in 2016 because of my determination, effort, and commitment. They highlight my positivity and organization as the key to choosing me among other workers.

- In 2018, the Edinburgh Council chose the house to implement a pilot programme to accommodate the most vulnerable women. I developed adaptability to new environments and the capacity for self-learning.

EDUCATION

- BSc (Hons) in Web Design and Development at Edinburgh Napier University (third year).

Sep 2021 - Currently

- HNC Web Design and Development at Edinburgh College.

Sep 2020 - Jun 2021

GRADES

- I completed my first year at Edinburgh College with a grade of A.

- Last year, at Edinburgh Napier University, I was graded with merits in five out of the six modules I had to complete.

KEY SKILLS

- **HTML & CSS:** I normally use these languages in all my website projects, and I also incorporate **Bootstrap** for templates

- **JavaScript:** Apart from HTML and CSS, I used JavaScript in one of my projects, an online quiz, for the module Web Technologies.

- **Java:** I created the mobile app, Around the World Quiz, using Java in **Android Studio**.

- **WordPress:** I had to replicate my first website, the Queen Bee Café, using this content management system.

- **SQL:** I learned SQL in the Database Systems module and used MariaDB and MySQL as database servers.

- **Python3 and Flask:** In my last project I had to create a digital portfolio using Flask to develop my app written in Python3. I used **Heroku** to deploy and manage it.

- **Figma:** In the module Interaction Design, I was using Figma to create the graphic design for a mobile app interface. It is a tool I have been using since then for my prototypes.

- **Adobe Graphics:** I designed the logo and edited the video for my first website using Illustrator and Premier Pro.
